Photo Rejuvenation IPL

Flawless Skin Photo Rejuvenation IPL

Photo Rejuvenation with an Intense Pulsed Light System, is a non-invasive treatment breakthrough that can correct a variety of skin conditions, such as facial skin imperfections, signs of aging (wrinkles), birthmarks, unsightly small veins and other blemishes. It offers a safe, non-invasive solution that can be tailored to your individual condition and skin type, providing superior cosmetic results and outstanding satisfaction.

What are the treatment sessions like?

Quick and Easy! After initial preparation, the therapist will move the hand piece over your skin. The hand piece emits light that is transformed into heat as it reaches the collagen beneath the surface of the skin.

Most people perceive the light as a gentle 'snapping' sensation.

Why are multiple treatments necessary?

Depending on the number of conditions you are treating, and the severity of the individual problem, a series of five or six treatment sessions may be recommended. Blemishes often clear after 1 or 2 treatments but for deeper vascular / pigmented areas such as birthmarks more treatments may be necessary. You can return to work the same day and resume all your regular activity. By dividing the full program into several treatments, the procedure provides gradual improvement with very low risk. It preserves the "no downtime" feature that people appreciate so much.

How do other treatments compare to Photo Rejuvenation?

While there are lasers that treat red spots, other lasers treat browns and others yet that are used for resurfacing of facial skin, no technology provides the long-term improvement of complexion and texture of the IPL Photo Rejuvenation system used. Many laser procedures require local anaesthetic and result in months of recovery from painful burns and increased redness of the treated areas. Photo Rejuvenation causes minimal redness which resolves in several hours, thus causing no disruption of your busy lifestyle.

What conditions can Photo Rejuvenation treat?

Photo Rejuvenation is effective in the treatment of imperfection from sun damage and photo aging, dilated veins and capillaries and the symptoms of Rosacea. Enlarged pores, dull complexions and other facial imperfections or abnormalities can detract from your well being and appearance, no matter how healthy and young you feel. Today's IPL technology improves both the superficial and deeper skin layers and rejuvenates the skin while at the same time delivering beneficial thermal energy to deep tissues. After a series of treatments, you can see a significant reduction of unwanted pigmentation and the appearance of smoother, revitalized skin. The same treatment can be used effectively on the neck, chest, and the hands

Photo Ageing which includes:

- Age Spots (Lentigo)
- Sun Damage
- Sun Spots (Solar Lentigo)
- Freckles
- Hyper pigmentation
- Seborrheic Keratosis
- Melasma (Pigmentation around the eyes and mouth)
- Poikiloderma (Mottled pigmentation, telangiectasia and atrophy, usually found on the neck)

Birthmarks which include:

- Port Wine Stains
- Stork Bite (Salmon Patch)
- Rosacea

Telangiectases (Vascular Lesions) which include:

- Spider Veins
- Broken Capillaries
- Cherry Angiomas
