## Waxing

### What Causes Unwanted Hair Growth?

Hair growth is the result of heredity and hormonal levels. Also, some drugs, temporary methods of hair removal, and some illnesses can stimulate hair growth. Usually, hair growth is desirable. But when the hair is the wrong part of your body, a woman's upper lip, chin, the bikini line, or a man's back or chest. There are several recognised methods of hair removal offered by Marani.

### Waxing

Waxing is a method of semi-permanent hair removal which removes the hair from the root. New hair will not grow back in the previously waxed area for two to eight weeks. Almost any area of the body can be waxed, including eyebrows, face, bikini area, legs, arms, back, abdomen and feet. There are many types of waxing suitable for removing unwanted hair.

Strip waxing is accomplished by spreading a wax combination thinly over the skin. A cloth or paper strip is then pressed on the top and ripped off with a quick movement against the direction of hair growth. This removes the wax along with the hair.

Hard waxing utilizes hard wax (as opposed to strip wax). In this case, the wax is applied somewhat thickly and with no cloth or paper strips. The wax then hardens when it cools, thus allowing the easy removal by a therapist without the aid of cloths. This waxing method is very beneficial to people who have sensitive skin.
